DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 12, 13, 14, 15, 18-23, 26, and 27 are rejected under 35 U.S.C. 102(b) as being anticipated by Cunningham (U.S Patent No. 4,811,486).

Cunningham teaches (see Figures 1-5) a folding knife comprising a handle (1) with a recess formed in the proximal end of the handle (1). A blade (2) is rotatably connected to the distal portion of the handle (1) and moveable between opened and closed positions. The blade (2) contains a first lock member receiving recess (22) that is formed by a bottom wall and two sidewalls extending upwardly therefrom (see Figure 5). A lock bar (13) is pivotally connected to the handle (1) and moveable between engaged and disengaged positions. The lock bar (13) comprises a first lock member (14), composed of a bottom wall and two sidewalls extending upwardly therefrom, that contacts the first lock receiving recess (22) when the lock bar is in the engaged position (see Figure 5). A lock pin (34) is connected to the handle via arm (28) and screw (36) and is adjacent to the lock member (14).

The folding knife further comprises a second lock member receiving recess composed of a bottom wall (24) and a sidewall (24a) extending upwardly therefrom (see Figure 3) and is adjacent the first lock member receiving recess.

The lock bar further comprises a second locking member. The second locking member is composed of a bottom wall and a sidewall extending upwardly therefrom and is adjacent the first locking member (see Figure 1 below, shadowed lines and characters added).

Figure 1

Furthermore, the bottom wall and the side wall of the second lock member are spaced apart from the bottom wall and side wall of the second lock member receiving recess when the lock is engaged and the blade is in the opened position.

Lastly, a spring member (19) is connected to the lock bar (13) and the handle (1).

Allowable Subject Matter

2. Claims 1-11 are allowed.
3. Claims 16, 17, 24, and 25 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claims 1, 16, 17, 24, and 25 are allowable because they define the position of the lock pin as related to the first and second lock members as well as the first and second lock member receiving recesses. Although Pardue (U.S Patent No. 5,822,866)

teaches the correct placement of the lock bar as compared to both the first and second lock members as well as the first and second lock member receiving recesses there is no motivation to combine Cunningham with Pardue because doing so would not work with Cunningham's invention.

Claims 2-11 are dependent on claim 1 and are therefore allowable.

Response to Arguments

4. Applicant's arguments with respect to claims 1-27 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Brothers et al (U.S Patent No. 5,685,079), Pittman (U.S Patent No. 5,615,484), Yerzley (U.S Patent No. 1,056,081), and Nishihara (U.S Publication No. 2005/0044717) teach folding knives pertinent to the instant application.
